**ENHANCE YOUR SYSTEM MANAGEMENT BY INTEGRATING GIS MAPPING,
DOCUMENT MANAGEMENT, AND CREATING RELATIONSHIPS WITH YOUR
OTHER GEOGRAPHIC DATA.**

ABOUT ROADWAY MODULE

Completing a comprehensive inventory of your roadway-related assets is just one significant benefit of your ability to perform advanced asset management. Often overlooked, your roadways and the assets they contain are a considerable expense that requires smart management. MuniLogic CE is fully integrated with Esri GIS technology and included as part of the core solution.

MuniLogic CE's Roadway Module has been designed to assist your Public Works department to become more efficient and organized. This integrates with third-party roadway management solutions, powered by AI (Artificial Intelligence), to plan and execute roadway maintenance proactively and to reduce the lifecycle cost. Ultimately, this module will free up budget dollars to avoid tax hikes and apply the dollar savings to other critical areas within your administration.

- Quickly identify the age and condition of assets.
- Create and modify routes for the collection of refuse, leaves, etc.
- Maintain a complete history of all inspection and maintenance activities.
- Create work orders with the full assignment and scheduling to crews.
- Maintain asset value using various methods for GASB34 reporting.
- All assets are linked to other MuniLogic CE modules for Mapping, Reporting, and Documents.

If you are ready to simplify your roadway management, give us a call today or email to learn more.
