MUNILOGIC CE'S STORM MODULE

MuniLogic
Simply Empowering

Code   Permit   Property   License   Zoning   Customer

Water   Storm   Subdivision   Roadway   Sanitary   Tax

KEEP AN INVENTORY OF YOUR ENTIRE STORMWATER INFRASTRUCTURE AND MANAGE INSPECTION AND MAINTENANCE.

ABOUT STORM MODULE

Local governments are socially and legally responsible for managing their streams. MS4 compliance is made easier with MuniLogic CE by tracking the monitoring, inspection, and maintenance activity performed on your stormwater infrastructure hence giving the Stormwater management module. Make your operations and administrative requirements easier by investing in the MuniLogic Stormwater Management module. With Munilogic and its partners, Microsoft and Esri, lots of things are possible. Call us today to find out more. Impervious structures such as sidewalks and roofs avoid rainwater from automatically sinking into the earth in urban and developed areas.

Instead, water rushes through storm drains, sewage networks, and drainage ditches, causing floods, degradation, turbidity (or muddiness), overflowing storm and sanitary sewer systems, and infrastructure harm. However, the stormwater management module by MuniLogic is essential.

The first step is to educate yourself about where rainwater and snowmelt flow on your land so it doesn't get soaked into the land. The next move is to implement best management practices to mitigate pollution and ensure that it is safe as it leaves your land. A good understanding of the permit specifications, as well as strong coordination between personnel and consultants/contractors, are needed for effective implementation and maintenance of a stormwater program and MuniLogic's Stormwater Management Municipal Software can work great.

- Quickly identify the age and condition of assets in Stormwater Management.
- Log all water screening/sampling performed as part of the NPDES requirements via Stormwater Management Municipal Software.
- Maintain a complete history of all inspection and maintenance activities.

- Create work orders with the full assignment and scheduling to crews.
- Maintain asset value using various methods for GASB34 reporting.
- All assets are linked to other MuniLogic CE modules for Mapping, Reporting, and Documents in our Stormwater Management Municipal Software.

If you are ready to simplify your storm management, give us a call today or email to learn more.
