TRACK ALL ACTIVITY WITH IN ONE PLATFORM

ABOUT ROADWAY MODULE

MuniLogic's Roadway Module is a core component of our integrated Asset Management suite. It is designed to assist your Public Works department to become more efficient and organized. Every asset in the module is tightly integrated with our Mapping Module, allowing you to see your entire network geospatially and bringing your data to life.

Build a comprehensive, easy-to-access inventory of every asset in your roadway system, all in one secure, accessible location.

Detailed Asset Records: Create a unique digital record for every asset, including Road Segments, Signs, Guardrails, and more.

Integrated Work Orders: Create Inspection or Maintenance work orders—from pothole patching to sign replacement—for any asset or group of assets. Include detailed instructions and assign the work directly to your crews.

GASB 34 Compliance: The dedicated GASB34 Tab is where all asset value, depreciation, and replacement information is stored and calculated, helping you maintain a clear financial picture and simplify compliance.

Integrated with Development: When a new Subdivision is approved, the new roads and signs can be seamlessly added to your asset inventory as they are dedicated and accepted by the municipality.

Ready to Simplify Your Roadway Management?

If you are ready to simplify your roadway management, give us a call today or email to learn more.
