TRACK ALL ACTIVITY WITH IN ONE PLATFORM

ABOUT SANITARY MODULE

MuniLogic's Sanitary Module is a core component of our integrated Asset Management suite. It helps you track all inspection activity, sanitary sewer overflows (SSOs), and asset value to enhance your system management. Every asset in the module is tightly integrated with our **Mapping Module**, allowing you to see your entire system geospatially and bringing your data to life.

- **Detailed Asset Records:** Create a unique digital record for every asset, including mains, manholes, laterals, and pumping stations.
- **Integrated Work Orders:** Create Inspection or Maintenance work orders for any asset or group of assets. Include detailed instructions and assign the work directly to your crews.
- **Sanitary Sewer Overflow (SSO) Tracking:** The dedicated SSO Tab allows you to keep a detailed log of all SSO events. Record the date, location, cause, and environmental impact. Crucially, you can also log the notifications sent out to regulatory bodies like the DEP, ensuring a complete record for compliance.
- **Connected to Your Citizens:** A sewer backup reported through the Customer Module can be used to instantly generate a work order in the Sanitary Module, linking the citizen's report directly to the asset and the crew's scheduled task.

Ready to Simplify Your Sanitary Management?

If you are ready to simplify your sanitary management, give us a call today or email to learn more.
