TRACK ALL ACTIVITY WITH IN ONE PLATFORM

ABOUT STORM MODULE

MuniLogic's Storm Module is a core component of our integrated Asset Management suite. It makes MS4 compliance easier by providing a complete digital inventory of your infrastructure and a robust toolkit for tracking all required activities. Every asset in the module is tightly integrated with our **Mapping Module**, allowing you to see your entire system geospatially and bringing your data to life.

- **Detailed Asset Records:** Create a unique digital record for every asset, including inlets, outfalls, pipes, and detention basins.
- **Integrated Work Orders:** Create Inspection or Maintenance work orders for any asset or group of assets. Include detailed instructions, attach relevant documents or plans, and assign the work directly to your crews.
- **Comprehensive Compliance Record:** By logging all water screening and sampling performed as part of your NPDES and MS4 requirements, you create a complete, defensible, and easily reportable history of your compliance activities.
- **Connected to Your Citizens:** A blocked storm inlet reported through the Customer Module can be used to instantly generate a work order in the Storm Module, linking the citizen's report directly to the asset and the crew's scheduled task.

Ready to Simplify Your Storm Management?

If you are ready to simplify your storm management, give us a call today or email to learn more.
