TRACK ALL ACTIVITY WITH IN ONE PLATFORM

ABOUT WATER MODULE

MuniLogic's Water Module is a core component of our integrated Asset Management suite. It helps local governments analyze, maintain, and plan for the future of their water assets by providing a complete digital inventory and tracking all inspection and maintenance activity. Every asset in the module is tightly integrated with our Mapping Module, allowing you to see your entire system geospatially and bringing your data to life.

- **Detailed Asset Records:** Create a unique digital record for every asset in your system, including hydrants, mains, valves, pumping stations, and more.
- **Integrated Work Orders:** Create Inspection or Maintenance work orders for any asset or group of assets. Include detailed instructions, attach relevant documents or plans, and assign the work directly to your crews.
- **GASB 34 Compliance:** The dedicated GASB34 Tab is where all asset value, depreciation, and replacement information is stored and calculated. The system can be configured according to your municipality's needs to help you maintain a clear financial picture and simplify compliance.
- **Dashboards:** Get a high-level, visual overview of all module activity right from your dashboard. Monitor workloads, track the status of open work orders, and make data-driven decisions.

**Ready to Enhance Your Water System
Management?**

**Contact us today to learn how MuniLogic's Water
Module can make a positive impact on your
department.**
