TRACK ALL ACTIVITY WITH IN ONE PLATFORM

ABOUT LICENSE MODULE

MuniLogic's License Module is a comprehensive solution built to bring efficiency, accuracy, and control to your licensing workflow. It is a core component of the integrated MuniLogic suite, connecting your office, your field staff, and your business community on a single, powerful platform.

- **Empower Your Community with the MuniCitizen Portal:** The process begins with our dedicated 24/7 online portal. Businesses and contractors can apply for new licenses and, crucially, renew existing licenses through customized, step-by-step web forms. They can upload required documents (like insurance certificates) and the application feeds directly into MuniLogic. They can track their application status in real-time and receive the final issued license directly in their portal.
- **Two Ways to Create:** Initiate a new application directly within the License module for non-property-specific licenses (e.g., Contractor License), or create one from a specific property parcel to automatically link it and pull in owner information.
- **Dedicated Renewal Records:** Each license application can house multiple renewal periods. Track each year's specific issuance and expiration dates, status (Approved, Expired, Denied), and any associated details.

Ready to make your license management a source of efficiency, not frustration?
Let us show you how MuniLogic can empower your municipality.
