

MuniLogic

Code Module

MuniLogic's Code Module manages all code enforcement activity. Track all activity, including Violations, Actions, Notices, Fines, Civil Action and more. This will also improve customer service by providing instant status of a violation and automatic notifications when cases are closed.

- Configure violation notice intervals and provide notification when due.
- Retrieve ordinance descriptions from the database automatically; saving time over constant typing.
- Schedule and assign investigations to field personnel directly on MuniLogic shared calendars.
- If a violation originates from a request, maintain this relationship to determine the originating source.
- Log all fees and civil action.
- Maintain all photos, reports or other documents directly on the code case.

READY TO SIMPLIFY YOUR CODE MANAGEMENT?

We're happy to share more information or schedule a demo.
