

MuniLogic

# Reporting Module

MuniLogic features a robust reporting engine, to provide virtually any report type desired. Custom reports are a part of a typical implementation which are produced and inserted into the system. All reports include the custom header so all output is specific to the organization. This helps to reduce printing costs by reducing the reliance on letterhead, carbon, etc.

- Filter any report based upon a date range.
- Sort reports by virtually any field.
- Filter reports by selected criteria without even performing a search.
- Preview all reports prior to printing.
- Export reports to multiple formats; PDF, Word, Excel, etc.
- Export to Excel with either formatting intact or just the raw data.
- Print blank reports for field completion.
- Use multiple report headers for different departments. If some of your departments use different phone numbers or logos, you can setup multiple headers to use on demand.

## READY TO SIMPLIFY YOUR REPORTING?

We're happy to share more information or schedule a demo.
