

MuniLogic

Water Module

Your water system is a complex network that provides a critical resource to your customers. MuniLogic SE helps you analyze and maintain your assets by providing quick access to your inventory and tracking all inspection and maintenance activity. Enhance your system management by integrating GIS mapping, document management, and creating relationships with your other geographic data.

- Quickly identify the age and condition of assets.
- Manage smoke and television inspections.
- Maintain a complete history of all inspection and maintenance activities.
- Create work orders with full assignment and scheduling to crews.
- Maintain asset value using various methods for GASB34 reporting.
- All assets are linked to other MuniLogic SE modules for Mapping, Reporting, and Documents.

READY TO SIMPLIFY YOUR WATER SYSTEM MANAGEMENT?

We're happy to share more information or schedule a demo.
